

Nikhil Kumar Jain

Senior Full Stack Engineer | React.js | Node.js | TypeScript

+919509144873, nikhil.wevois@gmail.com

[Linkedin](#) | [Github](#) | [Portfolio](#)

SUMMARY

Full Stack Software Engineer with 4+ years of experience designing, developing, and deploying scalable web applications, SaaS platforms, and cloud-native solutions using React.js, Node.js, TypeScript, JavaScript, Python, MongoDB, Firebase, AWS, and Google Cloud Platform (GCP). Experienced in building RESTful APIs, microservices, authentication systems, AI-powered applications, and responsive user interfaces. Proven expertise in full software development lifecycle, cloud deployment, performance optimization, CI/CD pipelines, and Agile methodologies.

TECHNICAL SKILLS

1. Programming Languages

JavaScript (ES6+), TypeScript, Python, Java, C#, C++, Dart, SQL

2. Frontend Development

React.js, Next.js, React Hooks, Redux, Redux Toolkit,

React Query, Context API, Vite, Webpack,

JavaScript (ES6+), TypeScript, HTML5, CSS3,

Tailwind CSS, Bootstrap, Material UI (MUI),

Responsive Web Design, Jest, React Testing Library

3. Backend Development

Node.js, Nest.js, Express.js, RESTful Services,

Authentication & Authorization, JWT,

Microservices, WebSockets, Socket.IO,

Redis, Swagger/OpenAPI,

Django, Flask, Spring Boot, ASP.NET Core

4. API Development

RESTful APIs, GraphQL, JWT Authentication, API Integration, Webhooks

5. Databases

MongoDB, MongoDB Atlas, Firebase Firestore,

Firebase Authentication, MySQL,

PostgreSQL, Oracle, Microsoft SQL Server,

Database Design, Query Optimization,

Indexing, Data Modeling, Caching

6. Cloud & DevOps

AWS, Google Cloud Platform (GCP), Microsoft Azure,

Docker, CI/CD, GitHub Actions, Cloud Deployment

7. Mobile Development

Flutter, React Native, Android (Java/Kotlin)

8. Software Engineering

Data Structures & Algorithms, Object-Oriented Programming

(OOP), Design Patterns, System Design, Scalable Architecture,

Microservices Architecture, Database Design, Performance

Optimization, Caching, Load Balancing

9. Version Control & Collaboration

Git, GitHub, GitLab, Bitbucket, Agile/Scrum Methodologies

10. Testing & Debugging

JUnit, PyTest, Mocha, Selenium, Postman, Chrome DevTools

11. AI & Modern Technologies

Generative AI, LLM Integration, Prompt Engineering, AI APIs,

Workflow Automation

12. Tools & Platforms

Visual Studio Code, IntelliJ IDEA, Firebase, Jira, Figma

CORE COMPETENCIES

Full Stack Development • React.js • Node.js • TypeScript • REST APIs • Microservices • MongoDB • Firebase • AWS • GCP • Docker • CI/CD • SaaS Development • Authentication & Authorization • AI Integration • System Design • Agile Development

EXPERIENCE

Senior Software Engineer

Vimovi Global Tech Pvt Ltd | Lucknow, Uttar Pradesh, India | Jan 2024 – Jun 2026

Product: Pyngyn – AI-Powered Project Management SaaS (<https://pyngyn.ai>)

- Developed and maintained 15+ full-stack features used across project management workflows.
- Built 30+ reusable React components reducing development effort by 40%.
- Designed and implemented RESTful APIs using Node.js and Express.js.
- Integrated AI-powered functionality and third-party APIs into enterprise SaaS applications.
- Collaborated with cross-functional teams following Agile methodologies and CI/CD practices.
- Improved application scalability, maintainability, and performance through code optimization and architectural improvements.
- Optimized API response times by 25% and Reduced page load time by 30%.

Software Developer

Sonant Technologies Pvt. Ltd. | Jaipur, Rajasthan | July 2022 – October 2024

Application Development:

- Designed and developed the SIGNey Application, initially implemented in Java to enable text, voice, and image inputs to be translated into Indian Sign Language.
- Extended functionality by developing a plugin in Flutter for seamless integration into web platforms.
- Later transitioned to Flutter to create a cross-platform application with enhanced accessibility and performance.
- Added features like generating detailed reports for translation history and implemented an interactive design for improved user engagement.

- Integrated efficient algorithms for real-time processing of various input formats to produce accurate and reliable sign language translations.

Sign Language Application:

- Created a comprehensive solution that supports multi-modal input processing (text, voice, and images) for Indian Sign Language translation.
- Focused on user-centric design by incorporating accessibility features and interactive elements to improve usability.

Streaming Systems:

- Developed and optimized a solution to stream Unity games to web portals using a Python-based program hosted on a custom server.

PROJECTS

Pyngyn – AI-Enabled Project Management Platform

Website: <https://pyngyn.ai>

Personal Project | 2025

- Developed and maintained scalable full-stack features using React.js, TypeScript, Node.js, and modern JavaScript frameworks.
- Designed and implemented RESTful APIs and backend services with Node.js, enabling seamless integration between AI-powered workflows and project management modules.
- Integrated Generative AI and Large Language Model (LLM) capabilities to automate task management, content generation, and team collaboration processes.
- Leveraged Firebase services for authentication, real-time data synchronization, and cloud-based application functionality.
- Utilized AWS and Google Cloud Platform (GCP) services for application deployment, scalability, monitoring, and infrastructure management.
- Built responsive and user-friendly interfaces with React.js, improving usability and productivity across web-based project management workflows.
- Collaborated in Agile development environments, following CI/CD best practices, code reviews, automated testing, and continuous delivery processes.
- Enhanced application performance, reliability, and maintainability through modern software architecture and optimization techniques.
- Utilized Docker-based development and deployment workflows to ensure consistency across environments and streamline application delivery.

Historical Events Timeline Web Application

Personal Project | 2024

Github: <https://github.com/nikhilkumarjain09/circular-timeline.qlt>

- Developed a **responsive web application** to showcase a **historical timeline** of key events, highlighting countries, locations, and event descriptions.
- Designed the timeline interface with **React.js**, enabling dynamic rendering of events, and incorporated **React Carousel** for smooth navigation through events.
- Designed and implemented a mobile-first responsive interface using Tailwind CSS, ensuring an optimized user experience across desktop and mobile devices.
- Implemented **interactive features**, allowing users to explore historical events and associated technologies in a scrollable timeline format.
- Deployed the application to **AWS CloudFront**, ensuring global accessibility and optimal performance.
- Access the deployed application at: <https://circulartimeline.s3.ap-south-1.amazonaws.com/index.html>
- Technologies used: **React.js, Tailwind CSS, React Carousel**

Backend Server API for School Management System

Personal Project | 2024

Github: https://github.com/nikhilkumarjain09/school_management_api.git

- Developed a **RESTful API** for managing school data, including **schools, classrooms, and students**, using **Node.js** and **Express**.
- Integrated **MongoDB** as the database to store and manage school-related data, ensuring efficient querying and scalability.
- Implemented **Role-based Access Control (RBAC)** to manage different user roles (Admin, Teacher, Student) and ensure secure access to the system.
- Utilized **JWT (JSON Web Tokens)** for **user authentication and authorization**, enabling secure communication between frontend and backend.
- Designed and optimized endpoints to handle CRUD operations for schools, classrooms, and students with **scalable architecture**.
- Deployed the API to **AWS Elastic Beanstalk**, ensuring easy scalability and efficient management of the application.
- Access the deployed API at: <https://school-management-api-env.eba-ascszbxw.ap-south-1.elasticbeanstalk.com>
- Technologies used: **Node.js, Express.js, JWT, MongoDB, Role-based Access Control (RBAC)**

DSLIS

Sonant Technologies | 2022 - 2023

DSLIS is a specialized system software designed to bridge the gap between the Railway IPIS (Integrated Passenger Information System) and a Sign Language Interpretation System. It ensures that public announcements, train schedules, and other critical passenger information are accessible to individuals with hearing impairments.

- Designed and developed a comprehensive software application for the Railway IPIS (Integrated Passenger Information System) using Python.
- Enabled real-time reading of public announcements from Railway IPIS system logs and transmitted them over a network for improved accessibility.
- Developed a **DSLIS receiver** to receive and process messages directly from the IPIS system.

- Provided a user interface to manage and announce special types of announcements and store manually created announcements for permanent use.
- Added functionality to manually enter text, translate it into sign language using the integrated DSLIS (Digital Sign Language Interpretation System), and play it for accessibility.
- Incorporated features to add and manage train schedules and announcements, ensuring better operational efficiency and communication.

SIGNey

[Sonant Technologies](#) | 2022 - 2023

SIGNey is a translator application for converting text into Indian Sign Language (ISL). As the sole developer, I successfully implemented:

- Architected and developed an Indian Sign Language translation platform supporting text, voice, and image-based inputs.
- Implemented multilingual speech-to-text processing and real-time sign language rendering workflows.
- Designed accessibility-focused user experiences to improve communication for hearing-impaired users.

Desktop-to-Web Live Streaming

[Sonant Technologies](#) | March 2023 - April 2023

Designed and implemented a live-streaming project enabling real-time communication between Unity and a Node.js-powered web portal. The system:

- Receives text input from web users.
- Translates the input into Indian Sign Language on the server.
- Streams the output back to the web portal via Unity.

EDUCATION

Bachelor of Technology in Computer Science

[Karnataka State Open University](#) | Mysore

August 2016 - May 2020

Percentage: 72.00
